

Engine output: **petrol 8.4 PS / diesel 9.4 PS**

Machine weight: **from 540 kg to 740 kg**

Machine payload: **from 550 kg to 700 kg**

For Earth, For Life

Kubota

KC70-4 / KC70-4 P

KUBOTA TRACKED DUMPER

COMPACT, POWERFUL AND DESIGNED FOR OPTIMUM COMFORT,
THE NEW KUBOTA KC70-4 SAVES YOU TIME AND TROUBLE.
10 VERSIONS ARE AVAILABLE (H/HV/VHD/SL/VSL),
POWERED BY DIESEL AND PETROL ENGINE.

Unloading operation

Unloading operation is fast and easy. The profile of the skip has been designed to ensure a quick discharge of the material. With a dumping angle of 88° (85° for HD/VHD versions), all materials exit easily from the skip in any work situation.

Compact Design

With a minimum overall width of only 758 mm (for all versions) the KC70-4 efficiently transports material through gates and doorways, between houses, buildings and many other narrow spaces. This makes it the perfect mini-dumper for renovations and urban areas.

Maintenance (*diesel version*)

Maintenance (*petrol version*)

A large opening bonnet gives good access to the main areas for daily maintenance: fuel tank, air filter, engine oil level, battery, and battery isolator switch (when present) are easily reachable.

2 clean and environmentally friendly engines available

Tough and reliable, the air and oil cooled **KUBOTA diesel** engine delivers high torque, enhanced power and optimum fuel efficiency to minimize operating costs. It also features cleaner emissions and quieter operation, which means it has lower impact on the environment.

Our KC70-4 P with the **petrol engine** gives you power combined with quiet running. Lower fuel consumption, less emissions and better features. KUBOTA mini-dumper KC70-4 P series with Honda's GX270 engine will give you exceptional performance.

Easy manual starting

All diesel versions as well as the HD and VHD petrol engine versions, have electric starting. All other petrol versions have a heavy-duty recoil starter, which must be operated from the driving position, in combination with the automatic mechanical de-compression system ensure you easy manual starting in all conditions.

Safety stickers

Easily visible from the operator driving position. The safety stickers give quick and easy understanding of the machines operations. This increases security and productivity. Even an occasional operator immediately understands how to use the machine.

Double cylinder (for versions with variable track)

This type of assembly structure reduces the minimum machine width to 758 mm (as standard versions) or can increase width to 1058 mm for extra stability.

Document holder

Waterproof document holder for user manuals protected in the locked engine compartment. This allows the operator to have the machine's documents always available.

KUBOTA TRACKED DUMPER

KC70 H/HV-4

Transmission system

The KC70-4 crawler dumpers are equipped with an hydraulic transmission. This advanced transmission offers smooth control, the operator can select the speed best suited for the terrain, and can easily shift from 3.3 km/h high speed on flat surfaces, to 2.2 km/h low speed for rougher terrain. This system helps make working more efficient and productive, reducing maintenance and also fuel consumption.

Grease tension system and short pitch track

The rubber crawler is tensioned by a grease cylinder. This feature allows cushioning when foreign materials are going into the crawler. In addition, the short pitch track offers smooth drive for higher comfort for the operator.

Variable undercarriage (for KC70HV-4 version)

The variable undercarriage extends the overall width from 758 mm to 1058 mm. At minimum width, the KC70-4 can easily go through a standard door. At maximum width, the KC70-4 offers great stability in all conditions.

Foldable foot plate

The KC70-4 features a foldable foot plate. When the plate is down, the operator can safely stand on it to operate the machine. When the plate is folded up, the overall length is reduced by 214 mm in order to gain space for transport or storage. The standing operation position makes it easier when getting on and off the machine.

Performance

With a maximum loading capacity of 700 kg (550 kg for HD versions) and a heaped volume of 0.34 m³ (0.29 m³ for HD versions), the KC70-4 can transport material inside and outside buildings where space to maneuver is limited. The KC70-4 can easily avoid obstacles with a rear angle of 26° and a ground clearance up to 202 mm.

Comfortable & Easy Operation

All levers and controls are easy to reach and operate. A grab handle bar secures the operator during operation.

KUBOTA TRACKED DUMPER

KC70SL/VSL-4

Hydraulic oil cooler (for diesel version)

The oil cooler is present only in diesel version (KC70SL/VSL-4). This makes them suitable for the toughest applications.

Strong self-loading structure

Hydraulic cylinders structure

The loading shovel is activated by two hydraulic cylinders located under the skip. Due to their position, they are well protected and they ensure a good lifting capacity.

Control panel

All the levers are well protected by a bar which is used as well to hold on the machine. The levers are designed for easy grip and activation in all job situations.

Self-loading shovel operation

The models KC70SL-4 and KC70VSL-4 are crawler dumpers featuring a self-loading shovel. This device is very useful when you need to remove loose material (such as sand or gravel) or to clear demolition rubble. The minimum width of 758 mm allows easy access inside buildings. On the VSL version, the variable undercarriage insures good stability regardless of ground condition. The loading capacity of 700 kg makes the KC70-4 SL/VSL the ideal work mate for moving material on the job site.

KUBOTA TRACKED DUMPER

KC70HD / VHD-4

Truck easy loading operation

Thanks to its high dump function, the KC70HD/VHD-4 can empty its load up to 1,43m high (pin height). In addition, the dumping reach of 447mm allows easy discharge of the load from the skip, whilst leaving good clearance to the truck edge.

Safety, tilt angle sensor

A warning buzzer turns on when the skip is at a certain level if the slope angle is more than 8°. A sensor located in the engine compartment, detects the angle of the frame. A micro-switch located on the lifting arm detects the position of the skip.

Convenient width

Like the other models of the product family, the Kubota KC70HD/VHD-4 has been designed to work in confined area. The variable undercarriage version allows it to be driven through narrow spaces when minimum width is set (758mm overall width) and insure excellent stability when the undercarriage is extended to the maximum position (1058mm).

Vertical lift

Due to the telescopic mast, the Kubota KC70VHD-4 guarantees maximum robustness and durability over time.

Battery switch

For all diesel models. For petrol, only on HD and VHD versions.

Stability alarm (only for HD and VHD versions)

If the machine is in a slope (on the two axes) above 8°, and the skip is raised, an alarm warns of a hazard situation.

Fuel tank tap

The fuel tank is fitted with a tap. If needed, the starter choke can be operated manually (petrol version).

High tip discharges in full safety conditions.

The telescopic lifting system of HD and VHD versions guarantees maximum stability in the unloading phases.

Easy refueling (for petrol version)

The console of petrol version can be opened for easily refueling of tank. In the diesel version, the operation is equally easy to accomplish.

Control panel

A holding bar protect the control levers. All the control levers are easy to reach and activate. The machines functions are easy and accurate to operate.

SPECIFICATIONS

Model		KC70H-4	KC70HV-4	KC70SL-4	KC70VSL-4	KC70VHD-4
Engine	Make	Kubota				
	Model	OC95				
	Output kW (PS) / rpm	7.1 (9.4) / 3500
